

**CLAIM AMENDMENTS:**

Please cancel claims 1-10, and add claims 11-23 as follows:

1. -10. (Cancelled)

11. (New) A flexible sheet wall lining comprising one or more phase change materials that each exhibit a phase change at a temperature in the range of 5°C to 40°C.

12. (New) The wall lining according to claim 11 further comprising an adhesive layer for adhering the flexible sheet wall lining to a wall.

13. (New) The wall lining according to claim 11, wherein the or each phase change is endothermic with increasing temperature and exothermic with reducing temperature.

14. (New) The wall lining according to claim 11, wherein the or each phase change material is in the form of particles.

15. (New) The wall lining according to claim 14, wherein the particles have a size in the range of 10µm to 120µm.

16. (New) The wall lining according to claim 14, wherein each particle is encapsulated with an impermeable coating.

17. (New) The wall lining according to claim 16, wherein the impermeable coating is flexible.

18. (New) The wall lining according to claim 14, wherein the particles are embedded in a layer of the wall lining.

19. (New) The wall lining according to claim 14, wherein the particles are adhered to an absorbent layer of the wall lining.

20. (New) The wall lining according to claim 11, wherein the wall lining comprises from 30% to 60% by volume of the phase change material(s).
21. (New) The wall lining according to claim 11, wherein the or at least one of the phase change materials is hydrated below the temperature at which the phase change material exhibits the phase change.
22. (New) The wall lining according to claim 11, wherein the wall lining comprises at least two phase change materials, the temperatures at which the at least two phase change materials exhibit the phase change differing by at least 1°C.
23. (New) A wall to which is affixed a wall lining according to claim 11.
